

Sustainable Economics (Himanshu Shete - 23B0770)

In the first week, I explored how data and economic models help explain the scale of the climate crisis — *The Climate Casino* helped me grasp the risks of inaction in a very real way.

In the second week, I learned how carbon pricing, through mechanisms like taxes and trading, can be a powerful tool to reduce emissions. Also the importance of designing these policies in ways that are fair and socially just.

The third week introduced me to green finance — including ESG, green bonds, and climate-focused investment strategies.

In the fourth week, I looked at what a “just transition” means — how green jobs, urban planning, and inclusive policies are essential to making climate action work for everyone, especially in a country like India.
